

ANITA WILLIAMS WOOLLEY

Tepper School of Business
Carnegie Mellon University
5000 Forbes Avenue
Pittsburgh, PA 15213

Tel. (412) 268-2287
awoolley@cmu.edu

ACADEMIC POSITIONS HELD

Carnegie Mellon University

Associate Professor of Organizational Behavior and Theory 2015-pres

Assistant Professor of Organizational Behavior and Theory 2008 – 2015

Tepper School of Business Faculty Giving Chair 2009-2010

Xerox Junior Faculty Chair 2010-2011

Harvard University

Postdoctoral Fellow, NSF-funded “Group Brain” Project 2003-2008

J. Richard Hackman and Stephen Kosslyn, co-PIs

EDUCATION

Ph.D. Organizational Behavior, Harvard University, 2003

Joint Doctoral Program at Harvard Business School and Department of Psychology

A.M. Social Psychology, Harvard University, 2001

A.B. Psychology, Harvard University, 1995

Honors: *Summa Cum Laude, Phi Beta Kappa*

RESEARCH INTERESTS

My research is focused on the organizational, team, and individual factors that influence the effectiveness of knowledge work teams. In my lab- and field-based research, I examine:

- Theory and measurement of collective intelligence in groups
- The effects of playing offense versus defense on team process and team decision making
- The factors that lead teams to be outcome- or process-focused
- The implications of multiple team memberships for individual and team performance

FELLOWSHIPS AND AWARDS

2011	Best Paper Award, Managerial and Organizational Cognition Division, Academy of Management
2010	Xerox Junior Faculty Chair, Tepper School of Business, Carnegie Mellon University
2010	Roman Weil Prize for the best unpublished paper on problem-solving, Carnegie Mellon University
2009	Faculty Giving Chair, Tepper School of Business, Carnegie Mellon University
2008	Finalist, Best paper of the year, <i>Small Group Research</i>
2007	Bok Center Certificate of Distinction in Teaching, Harvard University
2006	Best Research Proposal, Academy of Management Managerial and Organizational Cognition Division “Cognition in the Rough” Workshop

COMPETITIVE GRANTS RECEIVED

- “The Implications of Playing Offense versus Defense for Team Information Processing and Performance”: This project was an investigation of the effects of offensive and defensive strategic orientation on team information processing and decision making. This grant is funding both laboratory and field research of these effects in both civilian and military populations.
 - Source: Army Research Institute, 2008-2010
- “Investigating collective intelligence”: This project built pilot data collected previously to explore how the construct of collective intelligence generalizes to groups of different sizes as well as online groups. The intended final product is a short test battery that can be used to measure collective intelligence and predict performance of teams on a wide range of tasks.
 - Source: Army Research Office, 2009-present
 - Co-Principal Investigators: Thomas Malone (MIT); Christopher Chabris (Union College)
- “Measuring and modeling collective intelligence”: This project built on work demonstrating the existence of a “collective intelligence” in groups which is not significantly predicted by the intelligence of individual group members. In this project, we propose to test how the use of computer-based aids can enhance critical coordination processes and possibly increase collective intelligence. Data collected in the lab will also support a computer modeling effort to explore how other changes in group structure (e.g. size, incentives, resources) would further alter collective intelligence.
 - Source: National Science Foundation, Human Computer Collaboration Program, 2010-2012
 - Co-Principal Investigators: Thomas Malone (MIT), Christopher Chabris (Union College).
- "Improving collective intelligence: Investigating the effects of online groups, group size, and gender composition": Building on previous work by the investigators, the project will first develop an online test for collective intelligence. Then it will compare the results of online and face-to-face groups taking this new test with previous results for groups taking an offline version of the test. Next the project will use this test to systematically measure the collective intelligence of online groups that range in size from 2 to 20 people. This will lay the foundation for exploring whether larger online groups can take advantage of the increased resources that more

people bring without suffering as much from the process losses that usually accompany increased group size in face-to-face groups. Finally, the project will systematically measure the collective intelligence of groups with varying proportions of women. In doing so, we will test one particularly promising explanation for a gender effect on group performance: that groups with more women are less interpersonally competitive which leads to higher collective intelligence.

- Source: National Science Foundation, Virtual Organizations as Sociotechnical Systems (VOSS) Program, 2013-2016
 - Co-Principal Investigators: Rosalind Chow (CMU), Thomas Malone (MIT), Christopher Chabris (Union College).
- "Cultivating Collective Intelligence in Teams at PNC": Team performance is increasingly important to the viability of financial and professional service firms. This project will make use of HR data to examine performance of teams at PNC for factors predicting collective intelligence—or performance capability emerging from the coordination and collaboration of team members, varying from expectations given the competitive environment and capabilities of team members. We will examine archival data sources to identify the degree to which unexplained variance exists in team performance, and factors that may account for it such as team member characteristics and team communication and collaboration practices. In a third phase of the project, to be informed by analyses carried out in Phases I and II, we propose to collect additional information via interviews, observations, or surveys to further understand factors accounting for variance in collective intelligence at PNC and identify potential levers for management intervention.
 - Source: PNC Center for Financial Services Innovation, Tepper School of Business, June 2014-December, 2017
- “Tasks and Transitions: An investigation of Transactive Memory Systems in Teams Performing Multi-Task Activities”: This project will explore the effects of task type and sequencing on the formation of transactive memory systems (TMS) in groups, as well as the connection between TMS and collective intelligence
 - Source: Army Research Office, 2016-2018
 - Co-Principal Investigators: Linda Argote (CMU), Kyle Lewis (UC Santa Barbara) and Andrea Hollingshead (Univ Southern California)
- “Cultivating Collective Intelligence in Human-Computer Systems:” In this project we will broaden our exploration of the individual characteristics that most readily lead to collective intelligence in teams, as well as the technological tools that will most readily enhance it.
 - Source: DARPA, 2017-2018
 - Co-Principal Investigators: Michael Bernstein (Stanford), Melissa Valentine (Stanford) Christoph Riedl (Northeastern) and Thomas Malone (MIT)

PROFESSIONAL EXPERIENCE

MITRE, Inc.

Bedford, MA

Consultant, November, 2004-June 2008. Work with a government sponsor to observe analytic simulations and design and teach a course on analytic teams, leadership, and methods for practicing intelligence analysts and team leaders. Developed experiential exercises based on real threat scenarios and delivered relevant lecture material.

Research International

Cambridge, MA

Senior Research Analyst, March, 1997 through July, 1998. Designed and managed market research studies focusing on customer satisfaction and loyalty, new product development, and advertisement testing. Analyzed quantitative and qualitative data, produced reports and presentations for clients. Conducted executive interviews and moderated focus groups.

DIA•logos, Inc.

Cambridge, MA

Project Manager, August, 1995 through March, 1997. Managed corporate consulting projects, organized and marketed educational seminars, designed marketing and learning materials, and managed operations for a start-up consulting firm specializing in interpersonal communication.
